

ABSTRACT

Indramayu Poverty Data Web and Android Based Applications is an application which is designed to meet the needs of Indramayu Poverty Reduction Coordination Team officers in collecting poor population census. By using population data input features, there will be an output if it is categorized as poor or not. This poverty data is used as a reference for implementing PRCT other programs that only applies to poor people. For example, the local government is holding Rutilahu program. For Officers there is a feature for report recapitulation that appropriate with the program.

With all features of Indramayu Poverty Data Web and Android Based Applications, expected to provide convenience in categorizing the economic status of Indramayu people and implement local government programs that refers to the poverty data.
