ABSTRACT

In the era of globalization like this, every citizen using smartphone. That prompted the authors to highlight the work recently became a medium of communication between students and parents that the course on EMS Antapani. Smartphone is one tool or medium to find information on various things to help students and parents know the developments themselves or their children in the course EMS Antapani. In these problems came the idea to create a mobile web application. This application is built with structured programming method with waterfall technique implemented with PHP programming language supported by the use of the framework Jquery Mobile and MySQL databases.

This application focuses on providing data information students and parents of students, student attendance information, the information value of students by level of students and the overall value of student information. Which can all be accessed via smartphones students Elfas Music School.
