

ABSTRACT

Billing Management System is a system that is part of the Oracle E-Business suite used by PT Matahari Department Store Distribution Center division especially for data processing billing for services offered. To manage master data service charge that so many would be less efficient if procedures are now still applied. Therefore a module / new programs needed to process the data to be more efficient. With this new program is processing large amounts of data can be done without having to enter the data one by one. This allows the data stored in a file which will be processed by the system.
