

Abstract

Information occupies important and dominant things in an organization / company. Without information, the people involved in the organization / company include executives can not work efficiently and effectively, particularly in making decisions that are beneficial to achieve the goals of the organization / company is.

PT Pos Indonesia as one of the companies engaged in the field of products and services would require information that is useful for the survival of the company. State Owned Enterprises (read: BUMN) that consistently continues to make improvements, especially in the current flow of information for the executives to support decision making. Designing Interface of Executive Information System with User Centered Design (UCD) is a design that puts the executives as the center of users of the system development. The system will also be tested with the methodology of Usability Testing Heuristic Evaluation.

Developing interface executive information system with user-centered (UCD) is expected to provide information that is easily accessible, understandable, and relevant to the activities of the company in accordance with the access rights in helping executives make decisions.
