Abstract

ERP is a system used to help integrate all business processes in the company. ERP has many types of opensource and paid. However, the selection of an ERP system in a accordance with the strategy and objectives of the company is a separate problem. The first thing to do is to analyze the process bisnis on companies using AIM (Application Implementation Method). AIM has 6 basic steps or processes for the analysis of the needs in ERP implementation. AIM is a methodology that can answer business process solutions to gain time efficiency, reduce costs, and data integration. Because of the companies are existed in the developing stage by opening some branches of business in different places, so Open source as named Openbravo ERP is chosen. Open source Openbravo ERP web-based highly suitable for implementation of business process. All the business processes necessary for the company fits prefectly with the some modules provided by Openbravo.
