

## **Abstract**

Information systems and good information technology is needed to support the organization's goals and objectives. Information systems and information technology is also needed by Dinas Kesehatan Kota Bandung. Application of information systems in Dinas Kesehatan Kota Bandung currently has several constraints. No integration of information systems and information technology in Dinas Kesehatan Kota Bandung is currently one of the obstacles that need to be addressed. No integration of existing information systems will make health data duplication in Dinas Kesehatan Kota Bandung. In addition the process of reporting health data from Unit Pelayanan Terpadu Puskesmas to Dinas Kesehatan Kota Bandung is still stalled due to health data reporting process is done manually. With the strategic planning system is expected to solve the problem of information and information systems to support business processes in the health institutions.

Strategic planning has to be done through various stages. Starting with a literature study and data collection on issues related to business processes in Dinas Kesehatan Kota Bandung. After that the data can be analyzed and then used as a reference in information systems strategic planning frameworks using TOGAF ADM. Next is the testing phase. In the testing phase, the blueprint of the results of this strategic plan will be evaluated and assessed using EA score card by the management that will be used as a reference framework in the design of information systems.
