

ABSTRACT

PT. Kharisma Buana Jaya is a company of the apparel industry (garments), which distributes its products to retail - retail in Indonesia such as the Matahari, Ramayana, and Hypermart. View current conditions, finished good orders of instability that affect the purchasing process of raw material production. The process of purchase of raw materials in the production of the company based on orders from customers. Under these conditions, PT. KBJ require ERP system capable of handling problems that arise during the process of running the company's business, especially at the time of purchase of raw materials such as lack of data integration between the purchase with warehouse and accounting, absence of planning the purchase of raw materials production, and the absence of recording data supplier.

Implementation of the company's ERP system using open source applications of OpenERP because companies do not yet have a specific budget for the implementation of the system and OpenERP have dynamic properties that can be adjusted according to the needs and conditions of the company. By implementing OpenERP module purchase management at PT. KBJ the business processes and corporate resources can be optimized in terms of doing procurement requests to generate MO directly into the PO until receipt of goods to the shipment and recording invoices from suppliers to generate incoming shipment into invoices.

Implementation of Open ERP use spiral method where the stages conducted analyze of existing performed, Open ERP, form, gap / fit, risk, and business process improvement. Each of these stages documented in this study.
