

## **ABSTRACT**

*AZA Collection is a Small and medium-sized enterprises (SMEs) focused on knitted product located in Binong, Kiaracondong, West Java. AZA Collection used Make-to-Order for their work system, resulting on having no absolute schedule. Several issues frequently faced, for example unscheduled production process, abnormalities of data, and the lack of communication with other department caused by minimum usage of information technology. Those problem causing the production process to become not optimum. System needed to help the enterprise are information system based on the ERP. The concept of ERP already developed into a software, like OpenERP.*

*The implementation of OpenERP Manufacturing Module using Sure Step method would be really support the controlling of production process at AZA COLLECTION. Open ERP is a well-known management system and has been applied on big company, small company, textile, independent, and others. One of its function, like the availability of production process steps and the availability of work order form.*

*For future references, hopefully by the implementation of OpenERP Manufacturing module will help improve the process production. Therefore, it can solve some problems that occurred in the work order and documenting the production process.*

*Keywords : ERP, SMEs, OpenERP, Sure Step, Manufacturing, Production*
