

ABSTRACT

Red Cross Blood Donor Unit Bandung is one of the Red Cross Blood Donor Unit which supplies of blood bags in some blood banks and hospitals. At the Red Cross Blood Donor Unit Bandung system or process that occurs is still manual. This process starts from recording a blood bag supplies, recording and reporting of sales transactions per month.

To deal with these problems needed to facilitate the application of the Blood Donor Unit PMI in managing sales, featuring journals, ledgers, and supplies blood bags. Applications that have been built is a PHP-based applications with database MySQL, to minimize the process of entering data undertaken by admin, in an effort to reduce the level of error in the process of managing the data of blood, donors of data and data customer. Applications can also handle BPPD recording transactions that occurred in Bandung Red Cross Blood Donor Unit.
