

## ABSTRACT

---

*SMP Negeri 2 Dayeuhkolot Teacher Performance Assessment system is still manual, so it is less than optimal. Teacher Performance Assessment conducted principals 6 months or once a semester. It is less objective because principals only a few times to monitor the performance of teachers in the classroom. To be more objekif Teacher Performance Assessment results are supported by students. The reason is that students often interact and meet with teachers. The problem that arises is how to facilitate principal in assessing teacher performance and makes the results more objective assessment of teacher performance and how the students can give feedback to the teacher. The application has a facility for assessing teacher performance based on feedback from the web-based student. School head teacher performance appraisal facilitated so that the results more objective assessment of teacher performance. Application provides teacher performance assessment function in a way the students filled out a questionnaire on the application of the results in the form of a bar graph. This application is made by using waterfall models. This application is in making use tools Codeigniter and XAMPP.*
