ABSTRACT

On some the faculty at university that having laboratory and activities of practicum assistant certain have a process of practicum assistant recruitment. However when practicum assistant recruitment has some constraint, that is : validation administration requirements that candidates assistant practicum takes a long time , and manufacture of SK assistant practicum takes a long time. Therefore needed application for handling the constraint. However the making of the application needed resources to make application, and needed the large of cost and takes a long time .

Therefore made a software as a service for practicum assistant recruitment. With this application, users can use this application by means of enroll. Users must not build application from the beginning and build his own server. This application can also handle some service on faculty at university of the same.

Key word : Cloud computing, Software as a service
