

ABSTRACT

Efb is a tablet pc especially for the pilot to communicate between airborne flight and ground. Efb is use as help tool for pacing the available land in every airport and any data flight with web base. Xss is a kind of injection code attack, some kind of attack where the attacker try to enter the script to run some command. Sxx attack usually use to steal cookie from web, giving malware, session hijacking and malicious redirects. In this final project with black box testing method and done with giving security from xss attack.

Keyword: EFB, XSS, Black-box testing
