

ABSTRACT

Lazis Syamsul 'Ulum is Lembaga Swadaya Masyarakat (LSM) that manage zakat, infaq and shadaqah. The funds would distributed for internal and external lazis needs. In recording process and distributed fund managing, Lazis Syamsul 'Ulum still using Microsoft Excel that make the officer have difficulty when distributing the funds. So that, this final project will build web based application that able to manage zakat, infaq, and shadaqah funds distribution activities. To make this application is using prototype method like analyze each user requirement when system building, then describe running business process using flowchart and application modelling using data flow diagram. Database design are using entity relationship diagram. In implementation step is using PHP programming code and MySQL for database management system. Application testing is done by comparing the results of the manual with the results of the application. This application able to manage funds distribution process start from funds allocated, funds managing process, funds utilization process and able to produce funds allocated report, funds managing report, funds utilization report, funds distribution report then accounting record like general ledger and ledger.

Keywords: Funds Distribution, Funds Allocation, Fund managing, Funds utilization, Web Based Application.
