ABSTRACT

Technology development is very fast and plays an important role in terms of human life . The lack of computerized handling is still a lot going on in government agencies and public services such as health centers. Care of patients still use paper for the treatment and queuing at each poly . Handling in drug treatment are still not interconnected between poly thereby slowing the performance of the officer. Besides, the head of the health center are also experiencing difficulties in monitoring the progress of the condition of health centers. To handle the existing problems in the health center built a web -based application service health centers. Making the system using the programming language PHP with MySQL database and use the blackbox testing techniques testting .

Thus , it is expected that these applications can help puskesmas Tell the customer service.

Keywords : **medical center** ; **application service system settings and queuing ; MySQL process model ; computerization ; PHP.**
