

ABSTRACT

In the big city dining in a restaurant is a habit of the middle class and above. However people will be upset if we wait so long for the waitress served when they want to order menu. Technological advances now allow a person can order the menu quickly without waiting for the waiter. To simplify the menu at restaurant ordering a meal will be a mobile application on the android platform.

Android is an operating system for smartphones or tablet PC that was developed by Google. Android is opensource. So many android developers to develop application such as gaming, multimedia, file explorer, gps, etc.

In the Final Application Portal restaurant be constructed for the user and the server for restaurant managers. Where the user application using the android smartphone with the java programming language and the android SDK while the server is built with PHP language and SQL.

Keywords: Portal, Android, Java
