

## ABSTRACT

---

*MWD Denim Worker is one of company convection which is operate in production and sales denim clothing. MWD Denim Worker able to sell as many as 2000 clothing .Almost all of the business activity is manually so it's retard it is own business. Transactions recorded in the book, so that at any time want to check the report must look at all the data in the book, causing duplicate data, and if the book is lost then the transaction data go missing. The solution to deal such a problems with making an application which is can handle business activity with integrated database between inventory and sales. This application is created with Web Base and using waterfall method and the PHP programing language and MySQL with structured method, so in this condition this application is build by data flow diagram and specification flow. This application have 4 menu there are dashboard menu, master data menu, transaction menu, and report menu. This application will generate accounting report such as income statement and inventory card.*
