

ABSTRACT

Generally, Internet potential market in Indonesia increased rapidly, along with increasing society necessity of internet access, based on that case a lot of people who have a lot of money and knowledge about internet, establish an Internet shop service "Warnet" to facilitate social needs of Internet.

When warnets have been spread out with a huge number in the market then feasibility study of warnets should be done continuously so that warnet's management can make a fast and precise decision appropriate with the real condition of Warnet

In this final assignment will be made a software that could calculate the cost faster, shows the financial reports, analyze feasibility degree of warnet and its sensitivity from revenue and operational cost changes correctly so that it will help warnet management to take an action fastly and correctly concerning their warnet condition

Keywords : Information System, Feasibility, Financial data, Management
