

ABSTRACT

In the Beauty Auraku Skin Solutions, there is a wide range of activities such as a reservation the patient who will perform maintenance, medical records, and payment transactions. In addition, employees are required to collect all data such as transaction data, data of product and data the patient. The problem is the desk clerk into trouble when it will finding the patients who are going to the reservation and also in the management of data of product because they have to collected every day. Then the cash register also need time not least when it is managing the transaction because the process of transactions made using only the cash register.

Based on the problems, auraku skin of solution requires an application that can help resolve problems of a reservation, medical records, transactions and stock products to be more effective. The solution will be offered to help the problem is with the issue of web based applications using a database for data storage, and also the issue of features on any functionality such as search, additions, and a report.

Based on the results of testing User Acceptance of testing was definitely, 100 % of users involved in the application of this is a lot to say that this application has been right and is in conformity with the needs of each – each user and understand the concept of a system that is made. Therefore, we can conclude that this application has been able to help employees in auraku skin of solution in managing the data like a reservation, medical records, the management of stock products to the transaction.
