

ABSTRACT

PT Antam listed on the IICG list is rated well but performs poorly as the nickel price drops in 2012. It shows the factors that affect the company's performance. Company performance is not only influenced from the outside but also from within, and the way companies to overcome these influences that can affect company performance.

Through this research will be seen whether the factors such as corporate governance, capital structure, company age and company size will affect the financial performance of the company.

The data collection method is carried out by collecting data from CGPI issued by IICG as a corporate governance assessment of listed companies and financial statements taken from IDX. From the data we obtained 12 companies listed in CGPI and IDX. Data processing is done by using Eviews 7. This research uses data panel regression method.

Based on the results of data processing, corporate governance and company age have more data above average. And the capital structure has more data below the average. While company size and financial performance have the same data between above average and below average.

Based on the evaluation result corporate governance has a positive influence on financial performance. While the capital structure, company age and company size have a negative effect. From other variables only the company size variables that have a significant influence on financial performance variables.

Keywords : corporate governance, capital structure, company age, company size, financial performance
