

ABSTRACT

School of Applied Science, Telkom University have some laboratory that have been used as university lecture process supporting and scientific research. All of the laboratory are being monitored and coordinate by laboratory assistant. The process that being monitored are about laboratory supply data recapitulation, compain management process and other process. All of the process still running manually by written on a form that already mold. That thing makes laboratory management need an application that based on website which can manage molded form all at once becoming online form in the laboratory. Applications will be built using Codelgniter 3.1.2 framework and working methods using prototype.
