Knitting or knit can be translated to nets or fabric that curated manually by knitting machine. Creating a new collection of knitting design can start from season, trend forecast and develop from old designs. Post dynamic was taken from Indonesia Trend Forecast(ITF) 2017/2018 as a potential to create a new knitting design that different with new variation and improve knitting products it self. For the products, post dynamic theme can be curated from colors, structure and shapes. Characteristic from post dynamic are dynamic, field and asymmetric composition. Post dynamic characteristic can be reach with knitting technique that design fit with Indonesia's climate, like brioche, seed stitch, honeycomb and modular. Knitting characteristic that seems stiff and very structural can be used for knitting pattern and composition that can be develop to interesting and new variation for bold and new knitting products and for further project, post dynamic concept can help to make knitting design limitless in shapes composition and colors. With knitting techniques that already exist before can be combine with another techniques and different tools so the products can be fits to Indonesia's climate and colors composition with other materials too.

Passwords: Post Dynamic, Knitting and Trend Forecast.
