

ABSTRACT

SDN Wanasari 14 is one of the primary school in Bekasi West Java Province does not have a computerized system, especially in the processing of registration of new students. During this registration process is still done manually, by registering directly to the school and administrative staff enter data into Excel Microsoft.

As time passes, advances in information technology is already highly sophisticated and modern it needed a better service, fast and practical in the use of information systems. Therefore, in order to facilitate the process of acceptance of these new learners are made a new Web Based Application of Admission New Students With Online in SDN Wanasari 14 Cibitung. In this Application the prospective parents for registration new students online and can see the results of the announcement online and more accurate

The Final project is build using waterfall method and structured programming techniques imusing the programming language PHP as a scripting language and MySQL for web applications as well as the database , and using testing techniques Black Box Testing
