ABSTRACT

A simple logging assets located in the PT. Len Industri (Persero) is still a manual so easy error logging assets. Information system in PT. Len on the part of the fixed asset in the Accounting, accounts payable, accounts receivable and general ledger has not been integrated in makes it easy for data retrieval, therefore it often happens wrong logging debt burden causing asset depreciation increase from an estimate. To shrink the risk of the occurrence of errors in logging loaning assets or asset is needed a system that could be management fixed asset. Based on existing problems in pt. Len Industri (Persero), perform implementation of Enterprise Resource Planning (ERP) can be one solution. One of the vendors of ERP that provides solutions for the logging module SAP Fixed assets i.e. Assets.

The development of SAP ERP Module Fixed Assets by using the method of Accelerated SAP (ASAP) which has several stages i.e. identification, Identification of the scope of the problems, identification of research objectives, As Is analysis, analysis To Be, risk analysis, GAP analysis, and business process design proposals.
