

ABSTRACT

Application Montir Freelance Finder And Sparepart Store Based Android With Google Maps Currently, there are various kinds of workshops using the services of mechanic orders and spare parts but still a lot of the ordering process is still done with via SMS and phone. Booking via SMS and phone does not allow the restaurant to be able to know the exact location of customers. Seeing these problems arise the idea to build an Android-based applications that in it is able to facilitate the process of ordering, searching mechanic, and see the spare parts store. The methodology used in making this application is the Prototype method Aplilasi built using the programming language used is Java and C#. Database used is MySql and editor used is Android Studio, XAMPP And Sublime Text 2. Thus this application is expected to help customers search mechanics, and see the spare parts store.
