

ABSTRACT

Arabic Language is one of foreign language that quiet popular among Indonesian people. For moslems learn basic Arabic is very recomended to understand and memorize Al-Qur'an. For some people learn Arabic is more difficult than learn English because Arabic has different alphabet and so many vocabulary tha can be changed into many forms, therefore children better learn Arabic since young. Nowadays there are so many elementry school that give their student Arabic lessons since first year. They introduce Arabic for first year student and second year student by give them vocabularies to memorized. Until now, teacher and parent still use memorize methode for students. But the memorize methode can not increase student's interest, therefore an Arabic Lesson Applisation will be made for student based on their packet book.

The application is made from Android in minimum Froyo Operation System, according to MoU from SDIT AL-Bina Purwakarta the application will be used as companion for the lesson book. Vocabularies divided to eight theme based on Arabic Book . Application use input from user's touch, and system will release text and audio In Indonesia and Arabic for cocabularies they touch. Application equipped by scoring system to evaluate students. The evaluation used here is match picture to the right vocabulary, and choose one vocabulary fom three vocabularies that appropriate with picture.

The result of this final project is an Applicatin for learning English Based in Android which made based on Arabic book SDIT Al-Bina Purwakarta. It used to make an easier way for Learning Arabic and attract children interest to be more active in Learning
