ABSTRACT

Parents are the main factors of the formation of character in children. Therefore parents will always pay attention to the growing swell of the fruit of the heart. It is very worrying when parenting parents, not in the notice. Especially for parenting children in need special, one of which is ADHD (Attention Deficit Hyperactivity Disorder). ADHD is a disorder of growing flower child who is bad for life in the future. In addition to that is the number of ADHD disorder grow flowers of the highest. In Indonesia, it is estimated there are approximately 2-4% of school age children are ADHD children. The majority of ADHD children there are in urban areas with higher amounts amounting to about 10% of children suffering from ADHD. The most alarming there are about 7000 cases each year. While public knowledge about ADHD is very low so that parenting and the handling are still less well. When parenting and proper handling is very important for the formation of character. Let alone for ADHD children who should be noted as early as possible. Therefore the required educational media for parents in order to bridge the problems on ADHD children with both. Using qualitative methodes is a way of collecting problem and SWOT analysis for probelem analysis. Mobile apps designed for parents who had ADHD children. The existence of this design would be more parents know ADHD children to form good parenting and true.
