ABSTRACT

Telkom University Canteen is a unit under the direction of Telkom Education Foundation which is engaged in the trading of food of tenant and goods. In the management of tenants and transactions canteen management unit is still manual and has not been integrated. The management process caused the canteen management unit to have difficulty in managing tenants and transactions. Therefore, an application is created to handle the management of tenants and transactions. This application can handle the management of profit sharing tenants, the management of tenants and counters, the management of tenant menu list, and management of electricity and gas sales in tenants. Accounting records generated in the form of journals, ledgers, and sales reports per day each tenant. The application is built using Software Development Life Cycle (SDLC) method with waterfall design model. The creation phase uses the CodeIgniter framework with the PHP Language and is stored in a SQL Server database. With these features, this application can minimize existing problems.
