

ABSTRACT

PT. Bursa Efek Indonesia is a firm that engaged in the field of capital market. PT. Bursa Efek Indonesia already had they own system particularly to cultivate the process of financial. But the system is not optimal because the whole system was still running separately. This thing would make the employees of financial division difficult because they have to wait for the data given by the other division. Then, they would have to examined back to have the data are aligned.

Therefore, required the concept of the whole process of integration to all of the company business, one of them is operating on an Enterprise Resource Planning (ERP) Financial Accounting module. The implementation of the ERP is using the application of SAP (System, Applications, Production in Data Processing). By the presence of the concept of the implementation of SAP Financial Accounting with methodology Accelerate SAP (ASAP). The company will have an integrated system that can integrate business processes from different unit functions with relatively short and transparent time.
