

ABSTRACT

Waduk Jatigede is an artificial reservoirs made by government, which has begun flooded in August 2015 ago. The inundation takes 26 villages in the area Sumedang, West Java. Because of the flooding, the villagers that were evacuated becomes not had a stable job as it used to, that became farmers. Since losing their job, there are some people who start working by utilizing Jatigede scenery, which makes dining facility from bamboos at the edges of Waduk Jatigede, with the aim that people also can enjoy the beauty of the Waduk Jatigede while doing activities such as eating and drinking. However, after less than two years since they made the dining area, visitors who came isn't too much, so that incomes are also unstable every day. That matter is a problem for people who affected by dam construction of Waduk Jatigede until today. Seeing this problem, the designer provides the solution of the problems through the visual aspects of the approach, by redesigning the dining facility to look more attractive, comfortable, and beautiful by using observation user interest method, so that will bring many visitors to dining facility at the edges of Waduk Jatigede.
