

## ABSTRACT

---

*Futsal transformed into one of sport's most Indonesias people enjoy doing. In modern times there are still many places futsal using manual process, means such as book, appointments-to-face meetings or by the telephone, writing a paymen on paper, field reservation and scheduling arrangements are still done manually, and so forth. For this reason, an application need to be made to support the technology media, and the archivement of a solution that can produce applications that will be used to lease the futsal field. Making this application is done by the Waterfall method. This application is implemented with Codeigniter Framework, PHP Programming language, MYSQL database as data storage media and testing methods using black box testing. The result of testing this application can be used by 3 users namely owner, customer, and admin. Owner can process field data, rental price, tenants field schedule, activation, and payment confirmation, custumer can process booking field, and admin can validate anda manage owner data.*
