ABSTRACT

SD Baitul Hikmah is a school under the auspices of Baitul Hikmah Foundation Bandung City. This school is located at Jl. Mekar Indah No. 2B Settlement Mekar Indah Cijerah, Bandung 40213. The primary school applies the policy to the students to save. The proceeds of the savings can be allocated to school fees. Currently the SD does not have an application that can manage savings and school fees. Therefore, it is designed an application that can manage savings and payment of tuition fees so that it can generate an automatic report and filing a payment by a guardian. The method used in application development is waterfall method, while for application design using Unified Modeling Language (UML). The built application is a web-based application that uses PHP programming language assisted with Codelgniter framework and database used is MySQL.

Keywords: SD Baitul Hikmah, *saving management, saving tuition fee, framework Codelgniter*
