

ABSTRACT

The Dynamics of Earth is a part of Geography subjects which given in the first semester for 10th grade at SMA Negeri 2 Purwakarta. The teaching method of learning this subject in the classroom only lecturing materials by teacher and it is not visualize by another media. There is no interaction in class and the students are bore. Therefore, a media is needed to visualize the topic about dynamic of planet earth in order that student get easier to understand. The author built E-Learning using flash application for the dynamics of earth in geography with animation. This Application could help teacher delivering materials atractively with several visualization. The student easy to understand the materials and lecturing more effectifly in SMA Negeri 2 Purwakarta
