**ABSTRACT**

Special needs children generally could be defined as a child whom significantly having deviance during their growth, whether lack or abundance physically, mentally, emotionally, intellectually, and socially which differ them from normal children so that they need certain treatment and education.

Therapy Clinic for Children with Special Needs Yayasan Suryakanti is a clinic that that handles several types of children with special needs, namely Autism, ADD / ADHD, Down Syndrome, Mental Retardation, Developmental Disorders, Cerebral Palsy and Dyslexia. In supporting the learning process of children with special needs, facilities are needed that fit the needs of each child. Therapy for children with special needs is given in a multidisciplinary manner, there are 3 groups of therapies namely psychological, medical, and education.

The therapy room facility that will be provided in the design this time is in the form of a therapy room that supports the education process. Autistic Children, ADD / ADHD, Down Syndrome, Mental Retardation, Mentally Impaired, Cerebral Palsy and Dyslexia require therapy room facilities such as sensory integration therapy room, one on one room, and speech therapy room, occupational therapy room, physiotherapy room, biomedicine, etc. Autistic children, Dyslexia, and ADD / ADHD experience damage to the left brain, part of language. So they cannot imagine something abstract. Then the interior design of the study room is needed which can facilitate understanding and strengthen memory.
