

Abstract

As in Badan Pusat Statistika Nasional, in year 2010 traffic accident happens in about 66.488 times, where 19.873 caused dead. Paramedic who handling and evacuating the traffic accident victims could not also come right after the accident happen. This is because the number of road user keep on increasing every year, causing traffic jam. People around the accident scene need to be the first person to see and help the victims, even just move them to the sidewalk. Childhood age is the proper age for the development of brains to be educate. Many of games such as boardgame that indirectly speak about education for children. The effect of boardgame can be seen by the social aspect. When on playing, children will directly communicate to each other players, different to digital game that indirectly communicate to each other. How to design a boardgame which can educate children to know about evacuation technic to help the traffic accident victim? In this design, method that used are observation, interview, and questionnaire. When the design is finish, people should known about basic medical treatment and have willing to help each other.
