Accessories are a complement to clothing that can support beauty in dress. The user of accessories is increasing every year, with the increasing number of designs and kinds of accessories that fit the needs of the reason for the increase in consumer accessories. The number of local brand accessories has sprung up using non-textile materials. There are developments in the fashion industry, many opportunities for exploration of non-textile materials as fashion accessories, one of which is the use of CDs. In general, the use of CDs is only if it is in the form of a whole plate or a dish that has been cut into pieces, so that it is visually still not attractive. In processing CD waste, the technique that will be used is heating, a technique to change the shape of the material to produce an effect on the texture of the CD and to make it easier to form. With the new opportunity, the potential obtained is not only from an economic perspective and can be an opportunity to produce unique and attractive accessories.
