

ABSTRACT

City parks is one of the way to improve the quality of the environment in a city and in Bandung city itself has implemented this method by presenting several city parks that have their own characteristics in various places, and one of the park is the Lansia Park. Lansia Park is a park that intended for elderly visitors (senior citizens) activities such as sports, gymnastics, or just to visit the park. Most of the visitors come to work out or just exercise, but the existing sport facilities are not enough to support elderly visitors (senior citizens) who come with different physical conditons. Therefore alternative choice for sport is needed such as sport facilities that specifically for elderly. This design using qualitative methods and directly approaches with objects and respondents that produce informantions that needed. From analysis and approach that has been done generate the concept of designing a lightweight sports facility with a simple design in order to ease elderly in its use. The design of sport facilities with visual aspect use form elements, that is Geo Design and color ements that is red and black that can be easily applied to the produt in such a way. With the design of this sports facility, it's expected to be an option or other choice for elderly visitors to do sports activies in Lansia Park.
