ABSTRACT

Application for Management and Distribution of Donations The Orphanage is used as a place for giving donations where donors can choose which institution will be donated. This application has the following features as a registration feature for orphanage managers and also donors, management of orphanages, search for homes, management of nursing information, donations, donation reports. This final project was made using the Waterfall development method and using the PHP programming language with the CodeIgniter Framework and MySQL database and other software. This application is expected to be able to provide effectiveness and efficiency in providing information about nursing homes and donations.
