

ABSTRACT

Seminar participants Data is a major factor in the event of a Seminar to find out who the participants of the seminar and whether to be able to get involved in the making of seminars. This has an impact on both a Seminar and can be used for future evaluation, but often the Seminar participant Data is lost or damaged because it is less precisely in conducting a system of presences. With the same number of problems in the seminar, it takes the smart attendance system using a Web-based QR Code that can help solve the problem, because the attendance data will be automatically stored in the server. For the problems studied in this research focused on the data storage Seminar and the ease of accessing the data Seminar participants on the local network. Keywords: Smart Presence, attendance QR code, attendance QR Code
