

ABSTRACT

This study aims to describe the design carried out on garbage education vehicles located in Taman Lalu Lintas Bandung. This design was carried out because of the problem with the trash in the Taman Lalu Lintas Bandung area, which was less effective in the type of waste placement function because the visitors throw garbage not according to its type. The method used in the design is to use field surveys to collect data that will be used in this design. Users of this garbage education vehicle are children visiroe so that children know the type of waste and how to manage waste from an early age. In addition, this vehicle has other functions as a new icon in Taman Lalu Lintas Bandung. The result of this design is to get the final design of the vehicle that has the function of an educational facility for children who visit to Taman Lalu Lintas Bandung.

Keywords: Designing, Waste and Education, and Vehicle.
