

ABSTRACT

Ujung Berung Square is one of the destinations for people to spend their weekend. Various types of activities take place at the Ujungberung Square such as trading, playing, sports, music performances until the ceremony. One of the facilities in the Ujungberung Square is the library. However, with the condition of the library that located outside the room and the local government has not managed the product so the library less interested from people, many books are missing and neglected. Digital library is one of solution to reduce the negative impact on previous library. With a simple design and complete E-Book collection, it is easy for the digital library user to use the facilities that provided digital library that made by the author use a design that adjusts for open space, colors that are suitable, and easily recognized. The product has a roof that protect the users from the sun and rain, besides that the product can operate 24 hours and can be accessed at any time. With advantages and benefits when operated, it is expected to be able to add reading interest to the Indonesian people from an early age.
