

ABSTRACT

Sport Facilities Saparua Bandung is one of the Sports Facilities in the city of Bandung. This sports facility is generally used for basketball and badminton. The lack of availability of first aid kits in the Saparua Sports Facility, become a problem for this study. The purpose of this study is as one of the innovations of public facilities in the Saparua Sports Facility area, can provide independent facilities in first aid services, as well as designing first aid according to the existing ergonomic aspects in order to make it easier for visitors to use it. The research method used is qualitative research methods, where the method uses data collection techniques based on observations at the scene and then formed an idea to provide solutions to the problems raised. Data collection techniques used are qualitative research involving four types of strategies, namely observation, interviews, documentation, and audio-visual. The results of the research were in the form of data on the environment of Sports Facilities, visitor activities at Saparua Sports Facilities, and the functions and designs that will be applied to first aid products. This P3K is expected to become one of the supporting facilities for public facilities in Sport and also as an innovation of public facilities specifically in the medical field.
