The design form of the box compartment itself is in the shape of the design of the garbage education vehicle itself which uses a 2 seater caddy car type. The garbage compartment itself is divided into 3 small boxes which are also divided into 3 different colors. Own red compartment for types of B3 waste (Hazardous and Toxic Materials), green compartments for organic waste types (decomposing waste and biodegradable waste) and yellow compartments for inorganic waste types (not biodegradable). The distribution of colors from the compartment itself makes it easier for users, especially children, to learn to memorize the types of garbage in their environment.
