# ABSTRACT

In addition to Al-Quran there is other legal source for Muslims, namely hadith. Hadiths are all sayings, behavior, provisions and approval of the Prophet Muhammad were made as decisions or laws in the Islamic religion. Existing of hadiths are so diverse that they can be classified into several groups. In this Final Project, the author classifies hadiths which contain advice, information and recommendation. The form of classification used is multi-label classification so that the writer applies Multinomial Naïve Bayes as classifier

**Keyword**: Hadith, Classification, Multinomial Naïve Bayes, Chi-Square
