

Abstract

Taman Hutan Raya or commonly called Tahura is one of the tourist attractions located in the city of Bandung. There are many tourism options inside the Forest Park, such as waterfall tours, palace cliffs, deer breeding, jogging tracks, Dutch caves and Japanese caves, Ir. Djuanda and many more. One of the most visited places in the Grand Forest Park is a jogging track. The jogging track area is quite crowded on weekends. Because the path is very long, it takes the facilities needed by users of the jogging track in the Tahura. As the most visited tourist and public facility, this place still has some disadvantages. Such as the lack of garbage can facilities, comfortable resting places, and information boards. Therefore, the authors conducted a study aimed at ensuring comfort for visitors who were resting. Dalam doing the research the author uses the design method that is by data collection techniques. Data collection is done to obtain information carried out by observation, interviews, literature studies, and documentation. This design method is part of the method S.W.O.T. The results of this study obtained products that help visitors to be more comfortable by redesigning garden chairs with supporting facilities as needed. The conclusion of this study is the need for comfortable chairs while resting.

Keywords: Forest Park, Jogging Track
