Rumah Yatim is an Amil Zakat Institution as well as a professional, national-level social institution that has the task of helping to complete, distribute, and utilize zakat. In Indonesia itself, awareness to pay zakat is still very small and there is no place to handle and use the funds that have been obtained regularly and completely. Because of this problem, the financial system has not been well organized. System design in the Accounting module is the solution to this problem. Therefore, it is necessary to consider the development of an ERP system that can support financial activities in Rumah Yatim. This research was carried out by developing an ERP system using the Odoo QuickStart method. This methodology focuses on Small and Medium Enterprises (SMEs).. This research begins with interviews, making observations, analyzing well, evaluating, conducting, organizing, and discussing the Accounting module. Then do the simulation with all related parts. The results of this study are an ERP system design on Odoo that has been adapted to the company's business processes and business processes that can be approved that make it easier for companies to carry out accounting activities at the Rumah Yatim.
