

*REDESIGN INTERIOR LIBRARY OF NATIONAL TECHNOLOGY INSTITUTE
BANDUNG*

ABSTRACT

Books or electronic books arranged in a room and used to develop knowledge in the educational process as an educational tool for educators and students in teaching and learning activities. To accommodate it all, especially at universities in Itenas is in the library. Therefore, the Itenas's library is expected to be a place that can help support the learning process and improve the quality of students. To get it all, there are some aspects that are needed such as; complete the collection of books, the addition of supporting facilities to increase the attractiveness of visitors and make room expansion to increase the capacity of the library because the library of Itenas still does not fulfill the National Library Standard (SNP). In addition, the interior of the Itenas library building currently also does not reflect the characteristics of Itenas in accordance with its vision and mission of excelling in the field of Technology and Art which will be applied to its interior and is expected to increase concentration in the learning process.
