

ABSTRACT

This Islamic-based Junior High School is a response to an increase of population growth in the city of Bandung which has a population growth rate of 0.50% per year. The increasing growth rates population every year, need to be balanced with the availability of educational services that can accommodate the needs of education and religion specifically for adherents of Islam.

Interior Design Project of Darul Hikam Secondary School in Bandung With the Sustainable Design Approach is a new interior design located in the Dago Giri area. This design aims to create a school interior space that is following the standards to achieve effectiveness as well as efficiency in supporting the learning system, accommodating the characteristics of adolescents who are expressive and interactive and providing influence on the importance of maintaining long-term health and environmental sustainability.

The Interior Design Project of Darul Hikam Middle School in Bandung with the Sustainable Design Approach will create an expressive, educative and interactive space with the application of the theme Modern Islamic in Innovation. The atmosphere of a teenager as a dominant user, who likes new things or modern and is educative things. Islamic aspects to strengthen education are used to help direct student growth and development and improve IMTAQ. In the aspect of innovation realized by applying creative and pleasant space, it is expected to increase students' creativity to produce good achievements with insights about the environment.
