ABSTRACT

Coffee in STAN is a coffee shop located in the area of STAN (College of State Accounting). Transactions that occur in this store are buying goods directly by visiting the Coffee in STAN shop and making payments by paying cash. This application is made with web-based with the title of Sales Application at Coffee in STAN which is expected to provide an online ordering process by customers and can also order directly through the cashier using the application, transactions made with the choice of ATM payments or payments directly (cash), can provide product information along with available product details and provide results of sales reports. The application is designed using the PHP language, codeigniter and uses a MySQL database, using the Waterfall method. This application is expected to help Coffee in STAN improve service orders, and make customers more interested in coffee and increase company income.
