ABSTRACT

A mini bank is a place of practice for students who major in accounting to study or know a little about banking. The Mini Bank application is an application that manages deposit transactions account activation, withdrawals, loans. The problem faced in conducting operations is that the recording is done manually by logging into the book in accordance with transactions such as deposits recorded into the book of receipts and pulls recorded into the expenditure book, loans recorded in the book list of borrowers so that when serving customers it takes quite a long time and sometimes there is an error in recording. This application was created to help minimize errors in recording and speed up time in serving customers, this application was created using the PHP programming language with code frameworkiter and MySQL database system testing on this application using the black box testing method.

Keywords: Mini banks, deposits, withdrawals, loans
