

ABSTRACT

Butik Malla Ramdani is a manufacturing company that produces clothes. In the production process involves Raw Material Costs, Direct Labor Costs, and Factory Overhead Costs. The company has no record of costs incurred. With the development of information technology, an application is built that can help record the costs incurred. In addition, applications that are built can also help in calculating the cost of production and cost of goods sold. Web-based application for calculating cost of goods production and cost of goods sold with Activity Job Order Costing. This application is to reduce errors in cost of production and cost of goods sold. This application generates general journals, income-loss reports, ledgers, and revenue growth charts. This application uses framework codeigniter version 3.1.9 which uses the programming language hypertext preprocessor (PHP) and for databases using Structured Query Language (MySQL).

Keywords: Job Order Costing, cost of goods production, cost of goods sold, CodeIgniter, SQL
